Hi Dr. Zhang,

Thank you for sharing the MS and figures. I will review them, provide my edits, and return them to you by tonight or tomorrow. I understand sending the manuscript out for review in the interest of time - my main motivation for running the simulations myself was to ensure that I have learned the skills necessary to run a simulation with Amber independently, but I am confident that I've learned how to do this. I really appreciate your teaching and mentorship through working on this project, I've learned a lot and have really found a passion for research in this very interesting nexus of biology and computer science. I look forward to continuing to work with you on future projects.

Best,

Christopher Rood
